

Bailey

Bailey Zenith™ Expanded Mesh
Rainscreen System

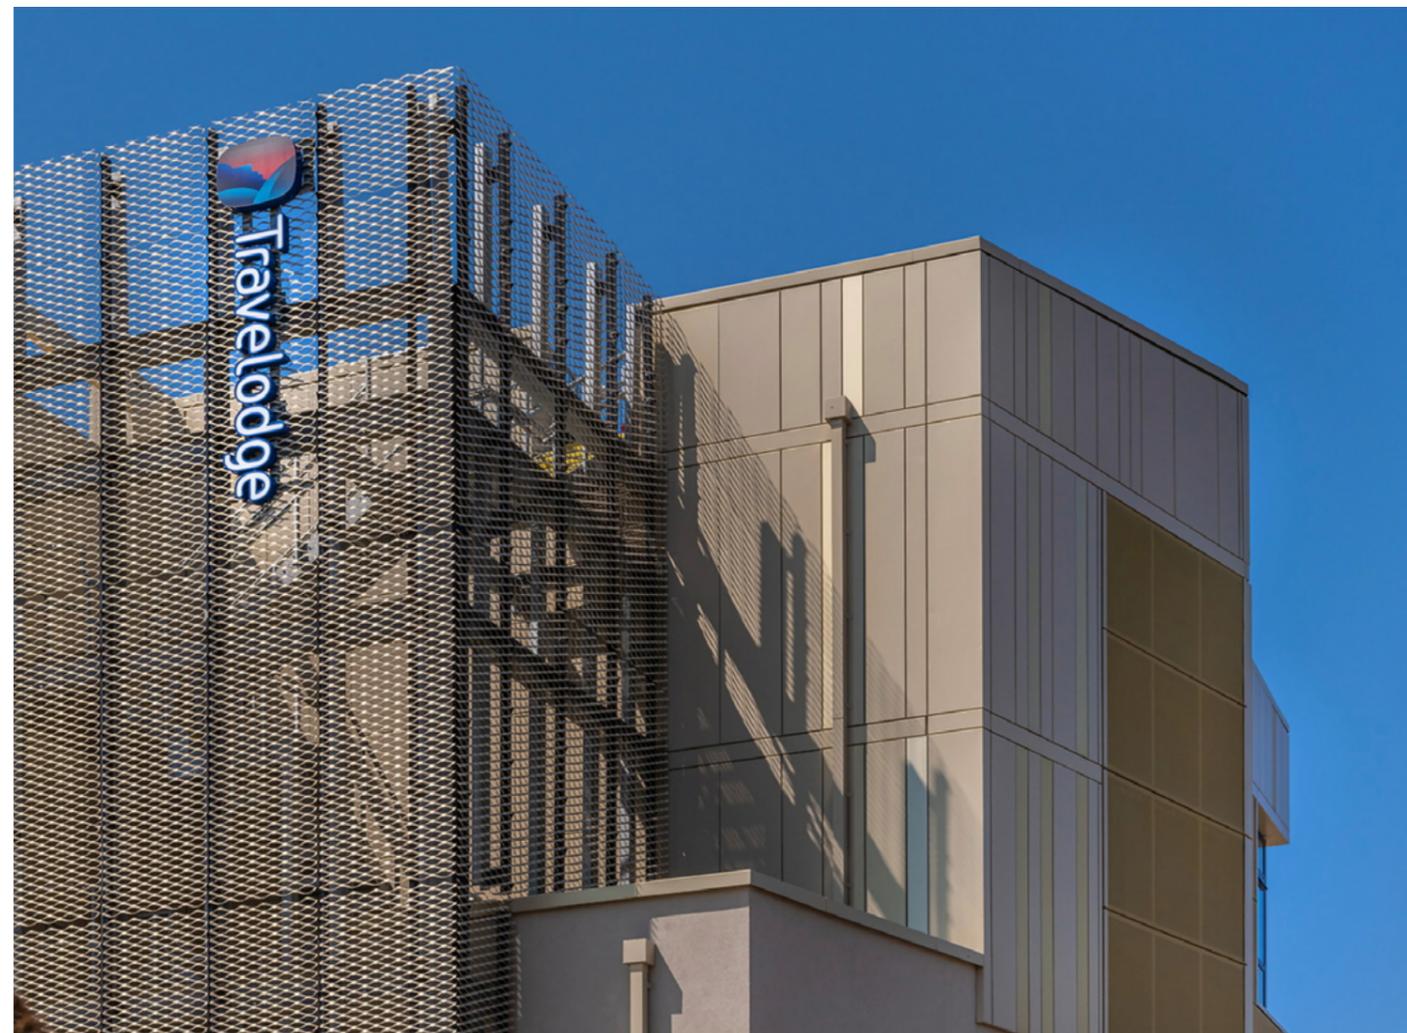

Ventilated façade system

Key benefits

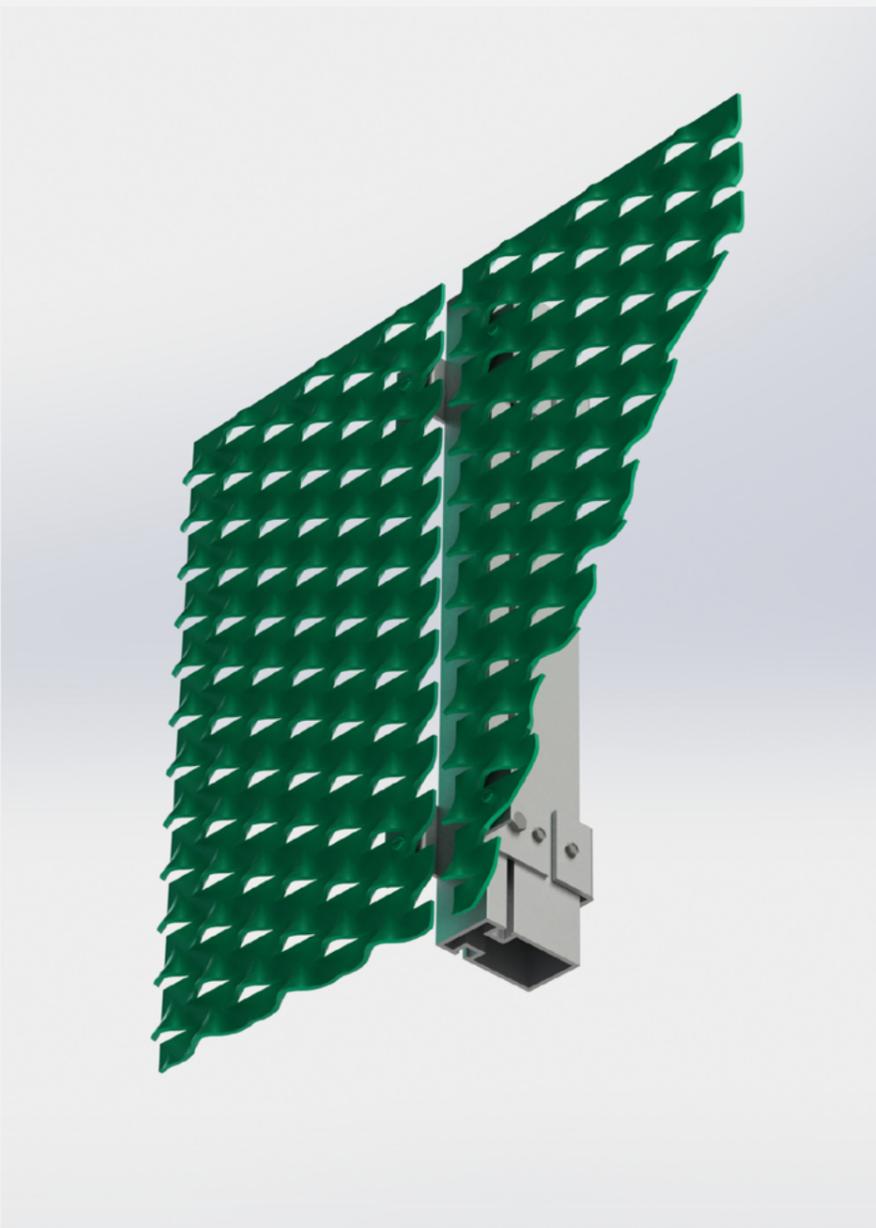

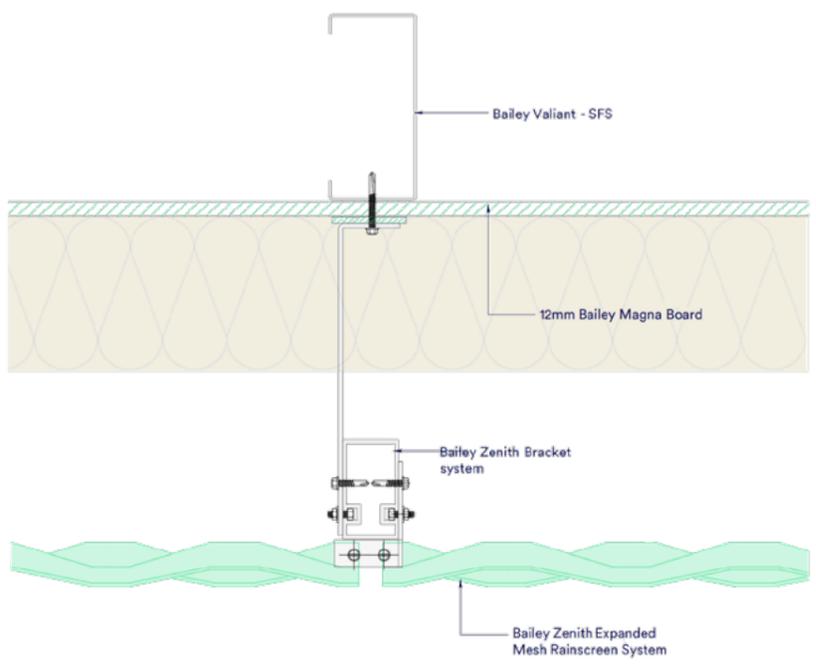

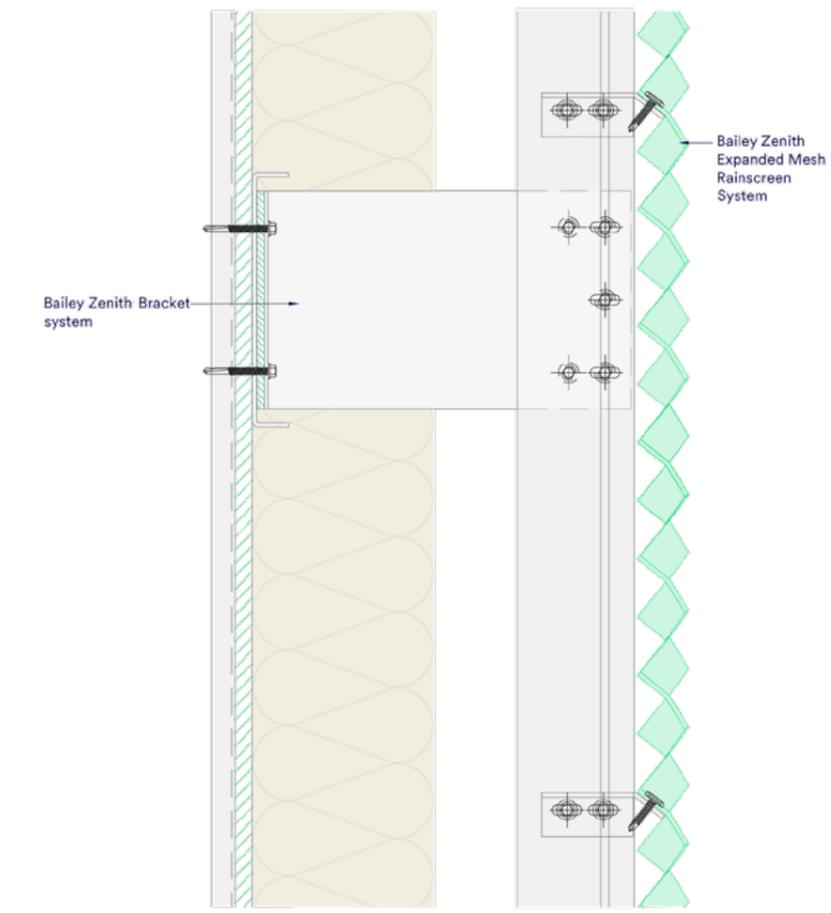

Ventilated. Framed or frameless.
Concealed fixing.
Range of finishes.
Range of panel sizes.

The Bailey Zenith™ Rainscreen system is a ventilated façade created using expanded metal, which can be used to realise stunning designs. The system is available in framed, or frameless versions providing a complete choice of fix and appearance. A range of mesh designs are available based on the airflow requirements for the project, with Bailey's designers available to assist in choosing the best option. Zenith™ can be produced for use in a standard, flat setting or to fit with more complex design features. Finishes include powder coating and anodizing.

Benefits and features

- Ideal where airflow is required e.g., car parks
- Aesthetically pleasing finish
- Speedy installation
- Offers design flexibility

Uses and boundaries

The Zenith™ system is designed for use in projects requiring air flow, especially those where air flow restrictions would be hazardous, for example car parks. The system is also perfect for projects where mesh or holes add to the design aesthetic of the project.

NOTE: In certain circumstances the Zenith™ system can be manufactured in more complex mesh designs. These applications can be bespoke and should initially be referred to your Bailey representative who can discuss your project with you.

Warranty

Warranty is available on the Zenith™ system and can be tailored to the specific needs of the building project. Talk to your Bailey representative who can work with you to advise on our warranty choices.

Sustainability

At Bailey we make every effort to deliver systems in as sustainable way as possible. The Zenith™ system is constructed from components that individually are either reusable or recyclable. The system itself also provides shading and weather protection to a building helping towards the efficient running costs of the building in the future.

Architects
Guy Holloway

Stunning yet complex. Intricate and beautiful, this bespoke design needed to be delivered within stringent architectural constraints. Our mission? Should we choose to accept it - which we did, of course: to work in a co-operative partnership to supply a high-quality product on time and within budget.

Bailey's technical expertise and forward-thinking, pro-active approach added considerable overall value to the project. And, was instrumental in delivering superb results. With practical, high-quality packaging and meticulous transport logistics, Bailey kept ahead of the curve to create and solidify a strong partnership.

Here at Bailey, we're delighted that our first collaboration with Guy Holloway Architects was so successful, that it was the start of a great working partnership. This high-profile architectural practice now views us as their go-to company for complicated façades.
